TD/SM-22-31

# TD/DB-22-36 - EUROfusion Joint Publications with Russian and/or Belarus affiliated authors

Dear Colleagues

Given that several EUROfusion beneficiaries have very strict rules for publications that have co-authors with Russian and Belarussian affiliations and following the implementations of restrictive measures and sanctions against organisations in Russia and Belarus following European Commission guidelines, **all EUROfusion Joint Publications with Russian and/or Belarus affiliated authors must be suspended or withdrawn.** For papers where all contributions from Russian and/or Belarus affiliated authors can be identified and removed without compromising the paper and in compliance with scientific publication ethics, these can be submitted or resubmitted without any Russian and/or Belarus affiliated authors.

For papers, **where Russian and/or Belarus affiliated authors contribution is essential** to the paper or/and cannot be removed and the paper is of key strategic interest for either the beneficiary and/or EUROfusion (i.e. publications related to the JET DT experiments), **the leading authors must contact the EUROfusion Programme Manager, and discuss these on case by case basis.**

Please note that the statements above do not apply to non-EUROfusion publications, such as publications within the context of the ITPA activities, that operates under the auspices of the ITER Organisation since 2008. ITER as expressed the wish that all ITER Members consider the participation in ITPA as direct contributions to ITER and encourage participation without regard to the participation of other ITER Members.

**Prof. dr. A.J.H. Donné**  
**Programme Manager**
