❑ Center for Nonlinear Plasma Scinece (CNPS):

➢ https://www.afs.enea.it/zonca/CNPS/
➢ Established in 2020 as "Virtual Center" based on two hubs, one located at the ENEA Frascati Research Center and another at the University of Science and Technology of China, Hefei, to promote a joint research and collaboration network.

❑ International collaboration network

➢ Institute for Fusion Theory and Simulation, ZJU
➢ ASIPP, Hefei (EAST/BEST/CFETR)
➢ SWIP, Chengdu (HL-2A/2M)
➢ NFRI, Daejeon (KSTAR)

Institute for Fusion Theory and Simulation, Zhejiang University

CNPS mission

❑ CNPS mission:

➢ The main scope of CNPS is the proposal of joint research projects, exchange of faculty members, researchers and students, and organization of workshops and schools.

➢ Topics of interest cover nonlinear plasma science in a broad sense, including laboratory and space environments.

➢ In particular, the magnetic fusion research activities and joint projects of CNPS are collocated under the umbrella of the CFETR-DTT collaboration agreement on science and technology (MoU) between China and Italy (to be renewed).

Institute for Fusion Theory and Simulation, Zhejiang University

❑ CNPS structure and plans:

➢ **CNPS-ENEA**: **Coordinator** (FZ) + **7 associates** (incl. M.V. Falessi, Y. Li) + collaborators on various ongoing research projects (ENR, TSVV …).

➢ **CNPS-USTC**: **Director** (Ge Zhuang), **2 Deputy Directors** (Zhiyong Qiu, IFTS + Quanmin Lu, USTC-Space plasmas) + associates and collaborators

➢ **Kick-off meeting planned in 2022** (2021, postponed due to Covid-19)

➢ **Focus on physics of burning plasmas**:

- ▪ Foundations of plasma science: thinking out of the box
- ▪ Target challenging problems on mid-long term
- ▪ Train next generation of plasma researchers
- ▪ Applications to present devices: EAST, HL-2A, KSTAR, …
- ▪ Applications to CFETR, BEST, DTT…

浙江大學聚變理論與模擬中心

Institute for Fusion Theory and Simulation, Zhejiang University

CNPS structure and plans II

❑ CNPS structure and plans:

➢ **From Bi- to Tri-lateral collaboration**: CHI-KOR-ITA

- ▪ **First ENEA-IFTS Workshop** on Fusion Theory and Simulation, Taormina, October 2-4, 2013
- ▪ **First Trilateral International Workshop** on Energetic Particle Physics, Hangzhou, November 9-12, 2017
- ▪ **Second Trilateral International Workshop** on Energetic Particle Physics, Seoul, November 10-12, 2019
- ▪ **Third Trilateral International Workshop** on Energetic Particle Physics, Frascati, 2021 ➔ 2022

➢ Extended from the very beginning to all interested Italian Research Labs and Universities

Frascati, January 10th, 2022

CNPS structure and plans III

❑ More on Trilateral collaboration: CHI-KOR-ITA

➢ Memorandum of Understanding: 3.rd Mtg. Seoul Nov2019

    i.   RMP-induced fast ion losses due to nonlinear wave particle resonances: K. Kim (NFRI), Z.W. Ma (IFTS)

    ii.   Observations of energetic circulating particle-driven fishbone/EPMs: H. Jhang (NFRI), G. Fu (IFTS), F. Zonca (ENEA)

    iii.   Zonal cross-scale coupling between EP and turbulence: M.V. Falessi (ENEA), Y. Li (IFTS/CREATE)

    iv.   Validation of MHD model in experiments: Z.W. Ma (IFTS), H. Park (NFRI)

❑ CNPS focus on Burning Plasmas (ENEA/USTC):

➢ Key role of CFETR and Burning Experimental Superconducting Tokamak (BEST: EAST follow up)

➢ Possible applications to DTT

ENEA
ITALIAN NATIONAL AGENCY
FOR NEW TECHNOLOGIES, ENERGY AND
SUSTAINABLE ECONOMIC DEVELOPMENT

❑ Publication summary (2020/21):

➢ **14 Journal papers:** 2 Rev. Mod. Plasma Physics, 1 New J. Phys., 1 Science China, 1 Phys Rev Lett.

➢ **9 Conference presentations:** Invited @ Varenna 2020, @ APPS 2020, 2021

❑ Education/Training:

▪ **Nonlinear kinetic theory and simulation of toroidal fusion plasmas** (Livio De Fabrizio - Ph.D. Student XXXV Ciclo, RomaTre University of Rome)

▪ **Test particle transport in tokamak divertor magnetic field geometry** (Leonardo Corsaro - Master Student, University College London)

▪ **Investigation of Negative Neutral Beam Injection profiles in DTT** (Simone Vitale - Master Student, Université Libre de Bruxelles)

❑ Joint CNPS-DTT MHD&Theory Seminars

☐ Prediction of drift Alfvén fluctuation spectrum in DTT: n=20 Toroidal Alfvén Eigenmode (DAEPS code)

$\delta\psi$: $\omega=1682.8-0.93i$(kHz)
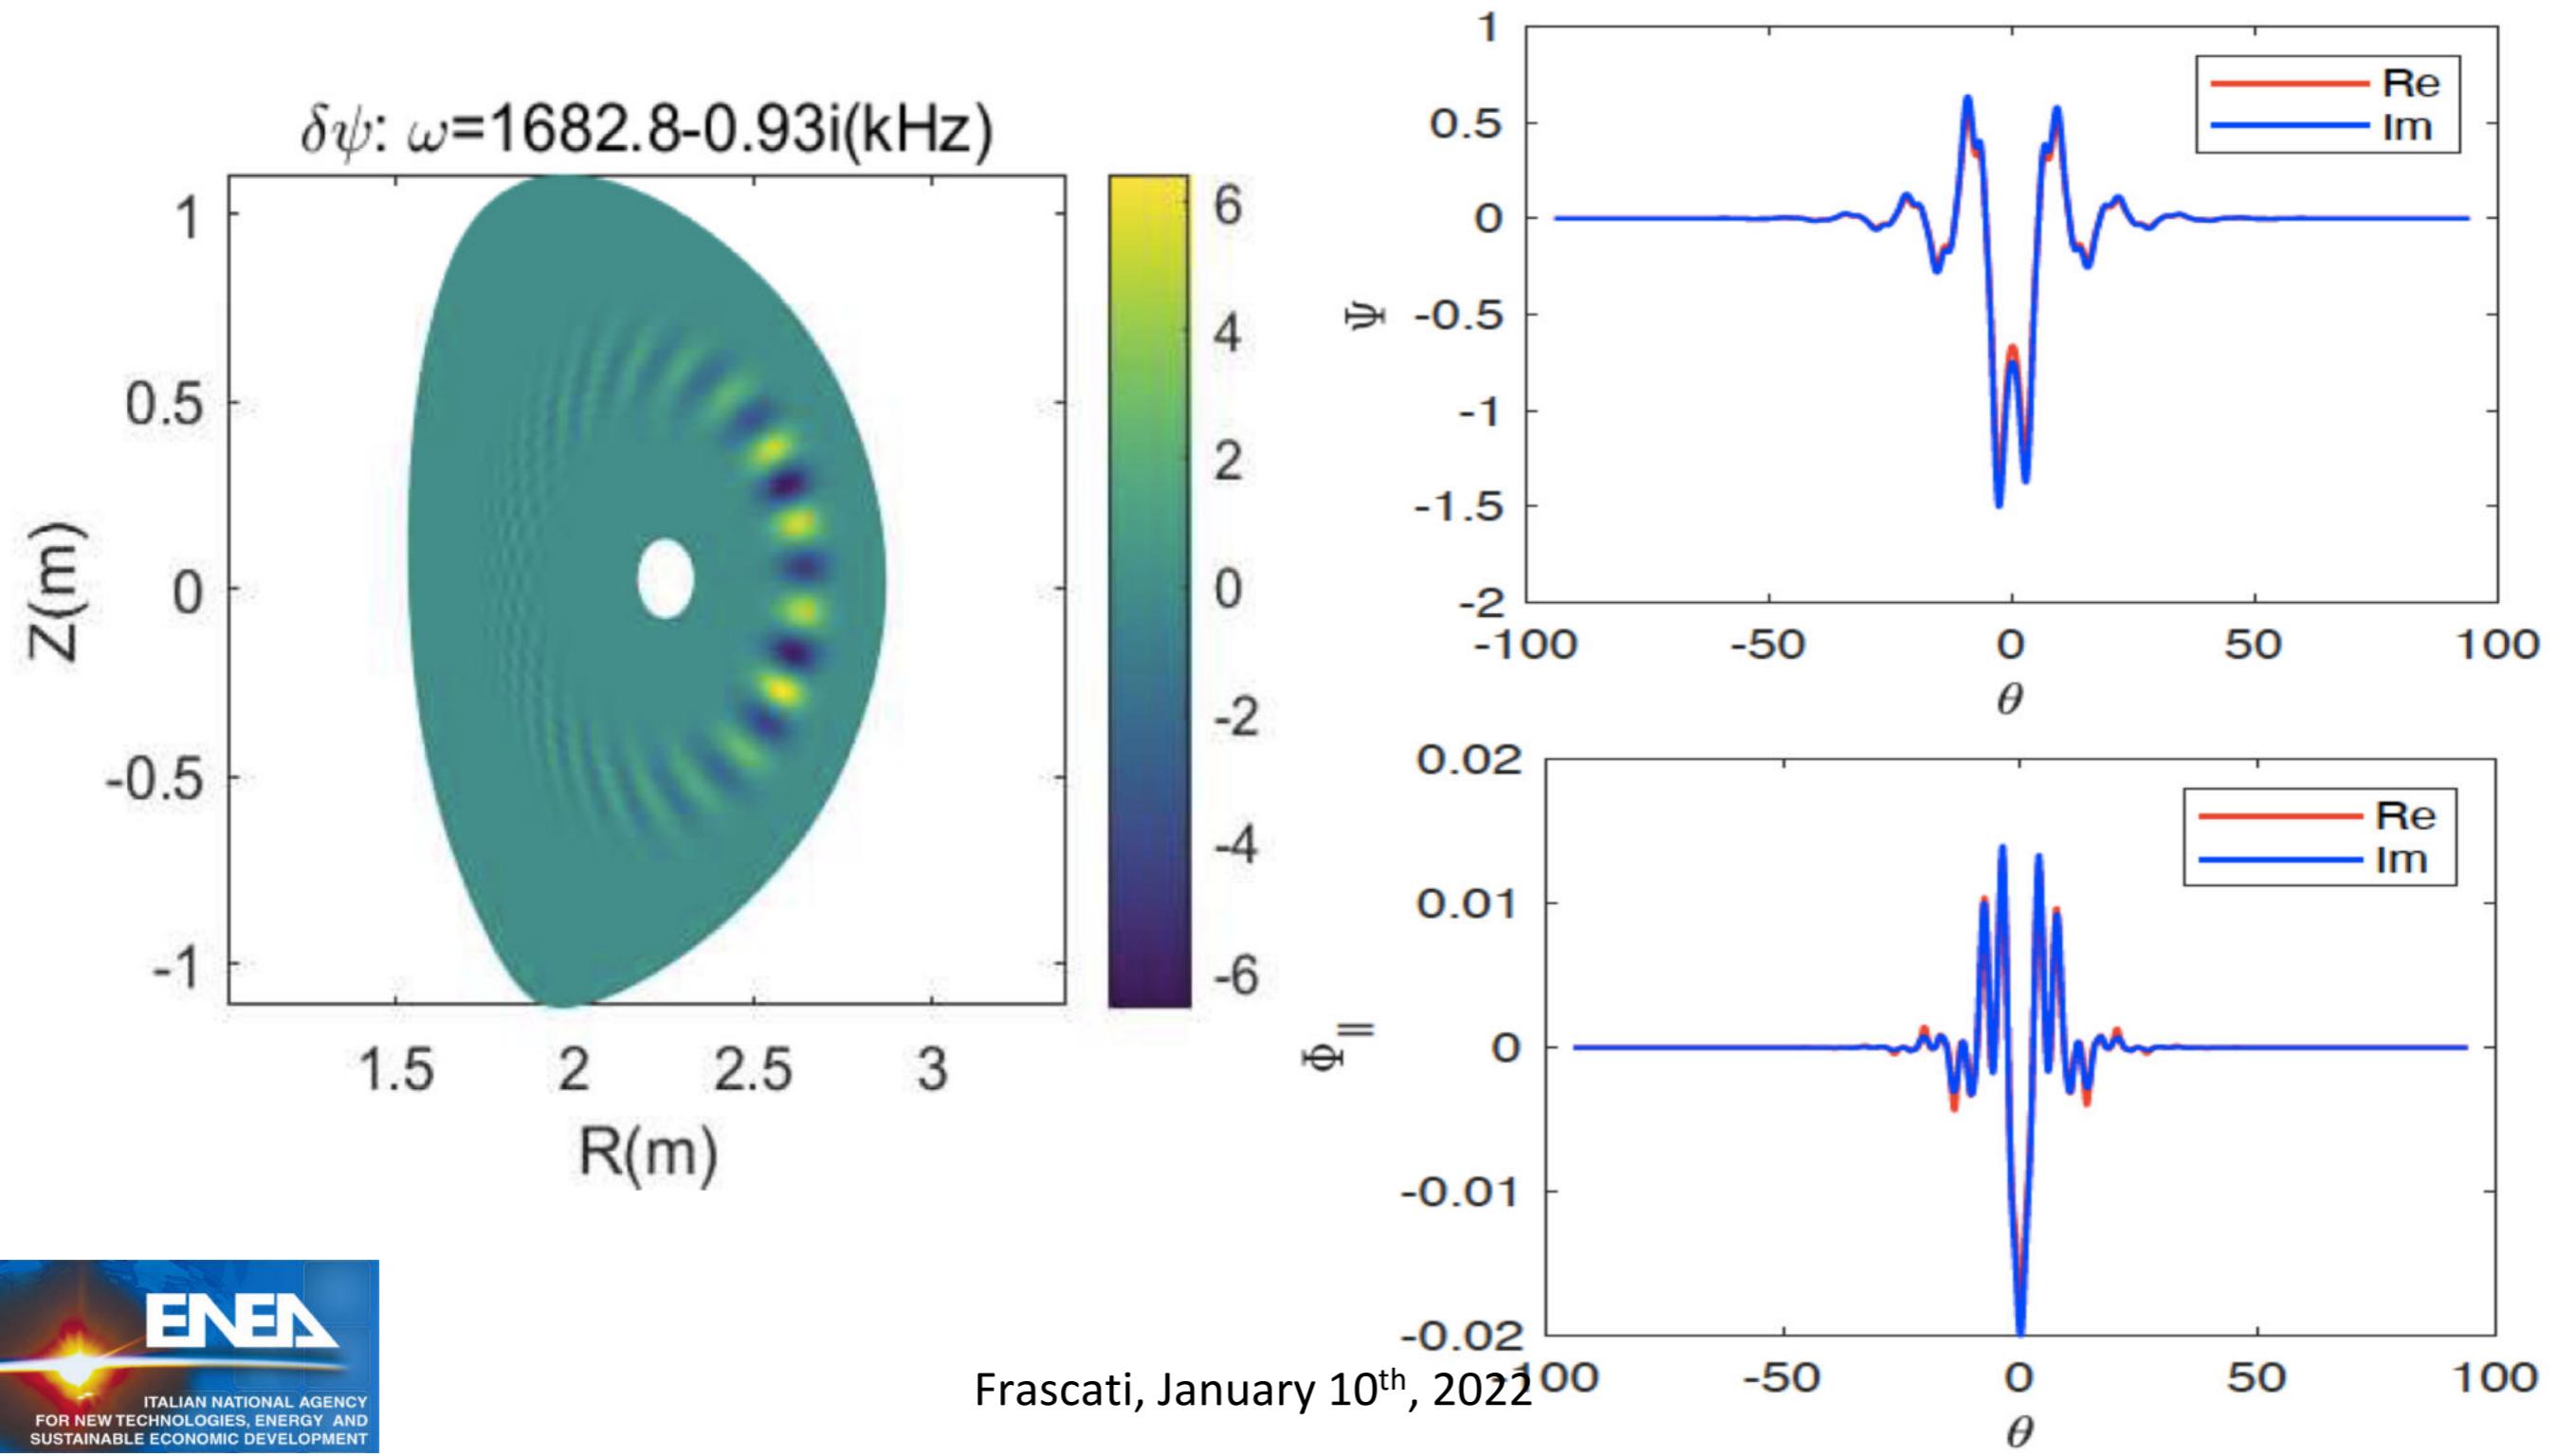

❑ Development of the E&B scheme for gyrokinetics (L. Chen, H. Chen, Y.Lin, Z. Qiu, FZ):

➢ Solve fundamental issues with Vlasov-Maxwell GK (joint CNPS-DTT MHD&Theory Seminar this Friday)
➢ Based on moment approach
➢ Suitable for analyzing global transport on long time scales

❑ Extension of the E&B scheme to high frequency (L. Chen, H. Chen, Y.Lin, Z. Qiu, FZ):

➢ Gyrokinetic electrons and Fully kinetic ions (GeFi) (Y. Lin)
➢ Based on moment approach and E&B (and potentials)
➢ Suitable for analyzing global stability and transport in a wide frequency range
